

VW Piezometers, VWP-3000 Series

Pore pressure measurement in soils and rocks & fluid pressures in hydro-fracture and pump tests using the well-proven method of converting fluid pressures on a sensitive diaphragm into a frequency signal

VWP-3000 Series

Overview

Geosense® VWP-3000 Series of Vibrating Wire piezometers use the well-proven method of converting fluid pressures on a sensitive diaphragm into a frequency signal.

Frequency signals are particularly suitable for the demanding environment of Civil Engineering applications, since the signals are capable of long transmission distances without degradation, tolerant of wet wiring conditions and resistant to external electrical noise.

APPLICATIONS

- Pore pressure measurement in soils and rocks
- Fluid pressures in hydro-fracture and pump tests

FEATURES

- Reliable long-term performance
- Rugged, suitable for demanding environments
