Overview of the Interface Layout

This guide will teach you the basics of interface layout.

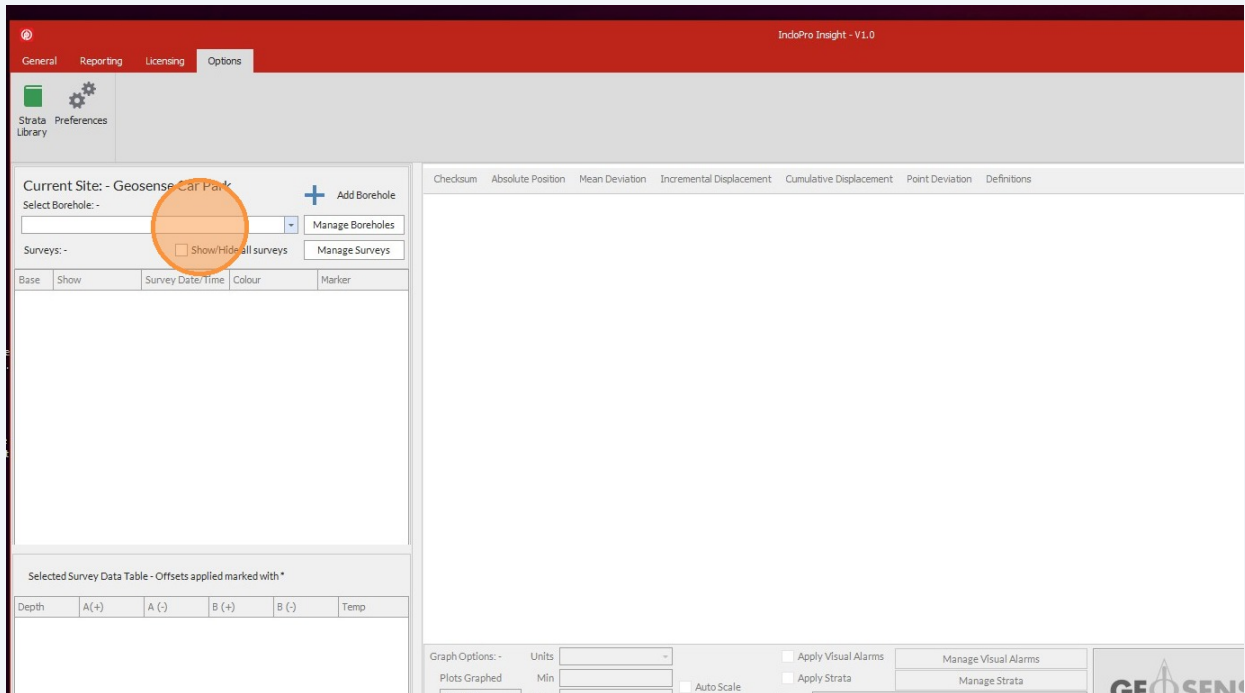

1

The ribbon at the top of the interface provides access to all the primary controls and workflows, organised into easy-to-navigate tabs such as General, Reporting, Licensing and Options. Each tab groups related commands so you can load site files, import data, generate reports, manage your license and customise the interface without leaving the main workspace.

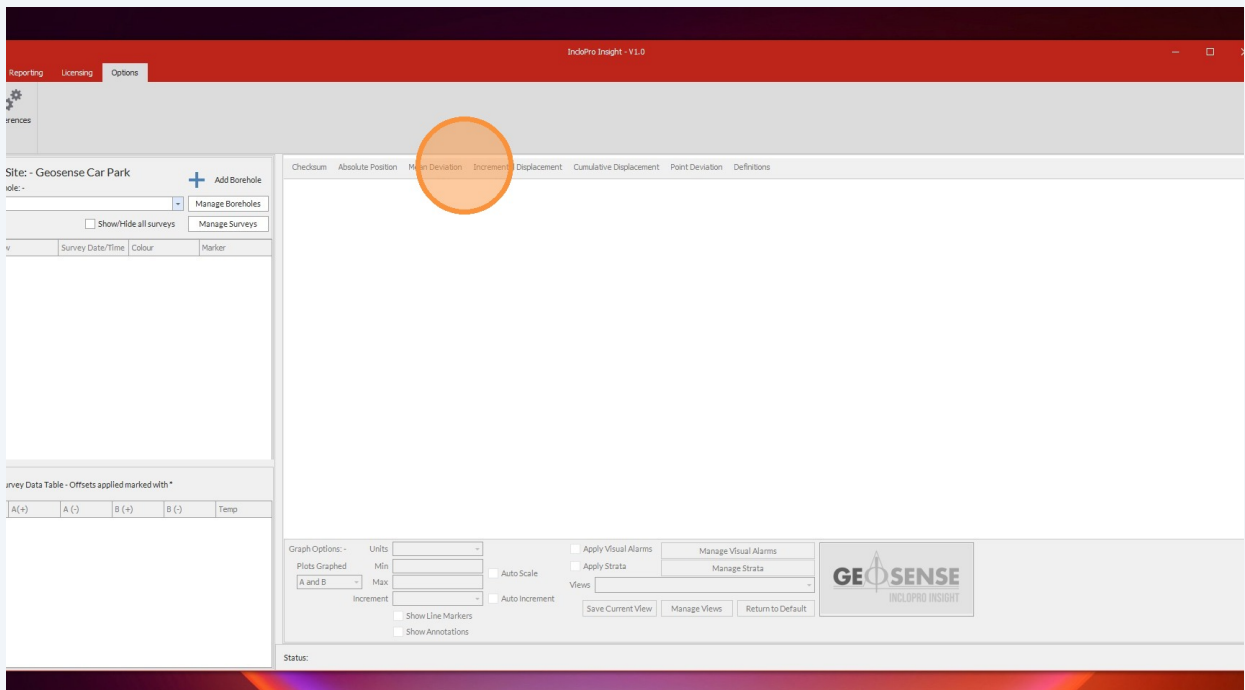

2

The left side panel provides controls to add/manage boreholes within the selected site. As surveys (data) is imported into boreholes they will be listed here. If you select a survey from the list, raw data will be displayed in the bottom of this panel.

3

The main graphing tab panel displays the selected survey depending on what calculation (tab) you are interested in viewing.

4

Below the graphing panel are the graph options that will allow you to customise how the graphs are displaying the data.
